

Kickain Firmware Update 1.1

Changelog

- Now detects ultra-short 5ms triggers (e.g. from Nerd Seq).
- Improved handling of DC artefacts (no clicking) when retriggering long decaying bass notes.

Additional options available by setting rear DIP switches.

Current DIP switches are:

- DIP 1 -- Mono mode with separate kick out Send/Return.
- DIP 2 -- Kick level CV input instead of V/Oct.

New DIP switch options are:

- DIP3 -- Kick Decay switch. Uses Bass Cut switch to offer 3 Kick Decays - 100%,75%,50% of the main Decay knob. This allows you to shorten the kick independently of the Sidechain decay.
- DIP4 -- Mute Button. The trigger button becomes a mute toggle button.
